HOW BEST TO IMPLEMENT SAP COMMERCIAL PROJECT MANAGEMENT 2.0
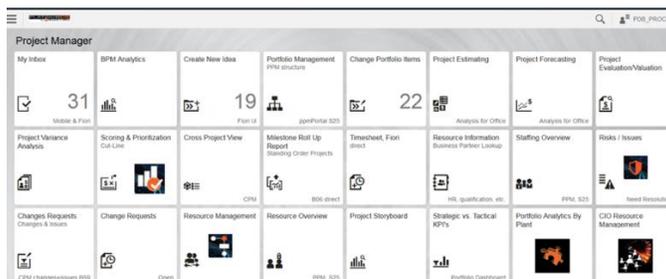

Platinum DB Consulting "Art of the Possible" Workshop Series
Workshop: April 28, 2016

In conjunction with SAP America, Platinum DB is facilitating a series of workshops, featuring educational content and customer case studies, to enable SAP customers to build and execute an effective Enterprise Project and Portfolio Management roadmap.

This workshop focuses on how best to implement SAP Commercial Project Management 2.0, while leveraging investments in other SAP applications, including SAP Project System, Fiori and more. This complimentary ($1,500 value) workshop will be held at the SAP Chicago Office (Downtown) on **April 28, 2016 starting at 9.30 am CDT**.

Workshop Theme:
"Maximizing Adoption Through a Compelling UX"

A staggering number of implementations fail because insufficient attention was spent considering **adoption** when building the roadmap for the overarching solution architecture. SAP has brought to market several applications and technologies, which address the User Experience aspects of the adoption challenge. Another critical element though, is designing processes appropriate to the roles of those participating in the system.

There is no cost to attend, but advanced registration is required as space is limited. Reserve your place today by clicking here or on the **REGISTER NOW** link at the top of the page.

Join this gathering of SAP specialists, business-process owners and subject matter experts who are focused on maximizing the investment in SAP solutions for their organizations.

Regards,
Anthony DeRosa
President, Platinum DB Consulting
